

Checklist of important resources for user-friendly web tools.

#	Criterium	Description	Done
1	Quickstart	Does the tool's interface display on its home page ways for users to quickly start using the tool?	
2	Simple interface	Is the interface simple, visually appealing, responsive, and easy to understand?	
3	Explain what this tool is	When accessing the home page, does the interface show what the tool is and what its purpose is?	
4	Documentation and tutorials	Does the tool have easily accessible documentation and/or tutorials explaining how to use it?	
5	Allow exploration	Does the tool present data organized in a way that information can be accessed on demand, that is, that it can be easily explored?	
6	Handle errors	When the user performs an incorrect action, does the tool provide messages indicating what errors occurred and how to recover from these errors?	
7	Use visualizations	Does the tool use data visualization techniques, such as graphs or tables, to summarize results?	
8	Export results	Does the tool allow search or experiment results to be easily exported as figures or tables?	
9	How to cite this tool	Does the web tool interface clearly state how to cite the tool and what the usage licenses are?	
10	Linking article to tool	Does the tool article provide a link on how to access the tool and provide data to reproduce the case studies (if presented)?
